**Table of content:**

- 1. Introduction..... 3
- 2. Multicash PLI (Elixir 0) format..... 4
  - 2.1. Domestic transfers import format..... 6
  - 2.2. Social Insurance Institution transfers import format ..... 7
  - 2.3. Tax office transfers import format..... 9
  - 2.4. Direct debit import format..... 11
- 3. Domestic counterparties import format..... 14
- 4. Multicash INT (MT103) format ..... 16
- 5. Foreign contractors import format..... 19
- 6. Import format of orders of cash withdrawal in a branch ..... 21
- 7. MT940 - statements format ..... 26
- 8. MT942 - statements format ..... 32

## 1. Introduction

Thanks to the integration of the ING BusinessOnLine with external book-keeping systems you can get tool, which will help you book quickly all transaction from your accounts and will automate the process of sending payments which were previously entered into your book-keeping systems.

Such integration is very profitable if the company prepares big amount of outgoing transactions, which have to be entered to book-keeping system as well as to electronic banking system. The connection between those systems cuts out necessity of twofold processing of single payment and automates the process of sending transfers.

Use of the connection automates booking of transactions from daily statement – there is no need to manually enter data from the statement to book-keeping system.

This brochure includes description of:

- PLI payments files format
- import template of domestic contractors
- MT103 payment files format
- import template of foreign contractors
- files with orders of cash withdrawal in a branch
- MT940 statement files format

The process of integration may be linked with the modification of book-keeping or pay system, so it requires commitment of a company which delivers given finance application. The ING Bank commits itself to verify conformity of prepared payment files with valid format in order to process them correctly.

## 2. Multicash PLI (Elixir 0) format

The Multicash PLI file does not contain any header. More than one payment order record is allowed in the file. Each payment order starts with transaction type number (110 = payment order, 210 = debit note; other numbers may be used if other types of transaction appear). After each transaction record there is an end of line character <CR><LF> (ASCII code: HEX 0D and 0A; Decimal 10 and 13). Text fields are in inv. commas "". Inverted commas aren't count to length of field. Other fields to be taken in inv. commas are marked: in inv. commas. The fields are delimited with coma character (.). If a field consists of more than one line (within one field), each line is delimited with | sign. (HEX 7C; Decimal 124).

In domestic payments import special characters given below are allowed:

\ - @ \$ < > , . ( ) [ ] { } / = \_ % ~ & ^ '

Abbreviations in format description:

*Type:*

mand. = mandatory,  
opt. = optional.

*Length/format:*

n = numeric (0-9),  
an = alphanumeric; content is in inv. commas "" (Hex 22); if there is more lines – there are | signs (Hex 7C; Decimal 124) between them.  
d = date, format: YYYYMMDD  
F = fixed length  
V = variable length

The example of a transaction record in the PLI file (instead of spacebar there is \_ character) with one payment:  
110,20040214,403595,10501038,0,"29105010381000002201994791","50105000861000002273635771","ORDE

"51" if transaction type = 110, "01" if transaction type = 210	mand.	8 a V	"51"
Reference number given by Customer	opt.	Max 32aV	"123456789"
End of transaction record	mand.	<CR><LF>	

## 2.1. Domestic transfers import format

The structure of a file can be defined in Import/Export module in Tools section. In order to define structure you should choose **Add template** and then **domestic transfer** as the type of template.

On the next screen you should define specification of imported file: name of template, data separator, code page, decimal separator, format and date separator. You should define whether text fields will be transferred in inverted commas and whether the first line of file includes column's labels.

File's structure field includes data, which is mandatory in imported file. In case of domestic transfer, it is:

- amount,
- beneficiary's name,
- beneficiary's account,
- ordering party's account,
- payment details.

On the left side there are other fields, which can be filled in but which are not mandatory. If you add an optional field to file's structure, given field will have to be filled in in imported file.

Ignore fields can be used to omit given values in file (e.g. file contains empty or unused fields).

File with domestic transfers may contain following characters:

- letters (also Polish)
- digits
- separators: "\, /, ;, ., (, ), [, ], {, }, =, \_ , %, ~, ^, ", ' , - , < , > , @ , \$ , & , " , # , \* , + , . , : , ; , ? , ! , | , " , \_ , " .

Field description	Type	Length /format	Example / Description
Amount in grosz (no commas)	mand.	Max 15nV	400011 Amount
Beneficiary name and address; each line is separated with " " ; in inv.commas	mand.	4*35 a V („ not counted)	"BENEFICIARY_NAME THE_REST_OF_BENEF_NAME BENEF_STREET WARSAW"
Ordering party's account number; in inv. commas	mand.	34 a V („ not counted)	"29105010381000002201994791"
Beneficiary's account number; in inv. commas	mand.	34 a V („ not counted)	"50105000861000002273635771"
Description of a payment order; each line is separated with " " ; in inv.commas	mand.	4*(Max 35aV) („ not counted)	"DESCRIPTION_OF_A_PAYMENT_1 DESCRIPTION_OF_A_PAYMENT_2"

### Example:

100;"Company";"2210501038800011111111111";"4010901870000000100198454";"Invoice20/2011"

digits account number)			number" field
Description of a payment order; each line is separated with " " ; in inv.commas	mand.	4*(Max 35aV) (," not counted)	See details below
Empty field (only inv.commas)	mand.	3*2 a F	""
Empty field (only inv.commas)	mand.	3*2 a F	""
"51" if transaction type = 110, 120	mand.	8 a V	"51"
End of transaction record	mand.	<CR><LF>	

Description of payment should be filled in according to rules given below:

(Caution: consecutive lines should be divided by "|" sign

- Line 1 – „Payer’s NIP” (10 n) – mandatory, correct NIP numer
- Line 2 – “Type of Additional ID” (1 n) – field should be left empty or filled in with: “P”, “R”, “1” or “2”, “Additional payer’s ID” (14 aV)
  - Correct PESEL number (if Additional ID is “P”)
  - Correct REGON number (if Additional ID is “R”)
  - For Additional ID’s type = “1”, “2” different than space
- Line 3 – Payment data in XRRRRMMNN format, where:
  - X – character which describes “Type of payment” (1 x) – one of following values: “A”, “B”, “D”, “E”, “M”, “S”, “T”, or “U” “declaration” (6 n)
  - RRRRMM – data according to description given below:
    - For “D” or “E” payment type – “000000”
    - For other – “RRRRMM” (where RRRR>1998 and 01<=MM<=12)
  - NN – „declaration’s no.” (2 n) – filled in with number from 00-89 range
    - For “S” or “M” payment type – filled in with number from 01-89 range
    - For “A”, “B”, “D”, “E”, “T” or “U” payment type – filled in with “00”
- Line 4 – „Decision/Agreement/Executive title number” (15 x)
  - For “S” or “M” payment type – line empty
  - For “A”, “B”, “D”, “E”, “T”, “U” payment type – different than space:
    - For „A”, „B” or „D” – filled in with the number of decision on imposing additional payment
    - For “E” – filled in with executive title number
    - For “T” – filled in with the number of decision/agreement on rescheduling payment's closing date
    - For “U” – filled in with the number of decision/agreement, which is the basis for introduction of installment plan

**Example:**

120,20091120,44,10500086,0,"38105000861000002306054822","83101010230000261395100000","Good Company|Sp. z o. o.|Piłsudskiego 3|47-220 Kędzierzyn-Koźle","Good Company|||",0,10101023,"6340136345|P73070601233|S20071201|",",",",51"

Not used; value = „0”	mand.		0
Beneficiary's BSC (Bank Sorting Code) – always 8 digits (from 3rd to 10th of the 26-digits account number)	mand.	8 n V	10500086 Validation of conformity between this field and „Ordering party's account number” field
Description of a payment order; each line is separated with “ ” ; in inv.commas	mand.	4*(Max 35aV) („” not counted)	/TI/N1111111111/OKR/ See details below
Empty field (only inv.commas)	mand.	3*2 a F	””
Empty field (only inv.commas)	mand.	3*2 a F	””
”71” if transaction type = 110 (tax office transfer)	mand.	8 a V	”71”
End of transaction record	mand.	<CR><LF>	

Description of payment should be filled in according to rules given below:

- Code words and their contents must be filled in in one line
- Line changing characters (“|”), if exist and are followed by characters different than space (e.g. continuation characters), have to be on 36<sup>th</sup>, 72<sup>nd</sup> and 108<sup>th</sup> place.
- It is acceptable to fill in with space until maximal length of given code word is reached
- It is acceptable to put in the end of field: space or space and line changing character (“|”) (field will be formatted)
- There are following rules on code word continuation characters:
  - they cannot be put between code word content (directly after code word and line changing character)
  - they cannot be put in the end of code word content, directly before the next code word
  - after continuation characters there should be some content (space is enough); with the exception of last code word (field will be formatted)
  - for each code word (the last as well), signs “|/” should not be put after acceptable code word content's length (those signs are not counted to given code word content's length)
- Only the following code words are allowed: /TI/, /OKR/, /SFP/ i /TXT/.
- Mandatory code words are: /TI/, /OKR/ i /SFP/.
- Proper order of code words must be kept: /TI/, /OKR/, /SFP/, /TXT/.
- Content of code words cannot exceed the maximum length, which is for: /TI/ - 15 characters, /OKR/ - 7 characters, /SFP/ - 7 characters, /TXT/ - 40 characters.
- For each code word the content should be transferred (consecutive spaces are treated as lack of content)
- “/” character cannot be used as code word's content (because those words have variable length)
- Field control rules are the same regardless of last code word type (mandatory - /SFP/ or optional - /TXT)
- “Additional information” field should be filled in according to established validation rules (Validation rules of the Ministry of Finance)

After TI code word – 1 x Type of ID (acceptable values are: N – NIP, R – REGON, P – PESEL, 1 –ID document, 2 – Passport, 3 – Other), 14 x ID

After OKR code word – period in rrtabcd format; rr – year, t – liability term type: M – month, P – half of the year, R – year, K – quarter, D – ten days, J – day, abcd – period number

After SFP code word – Form or payment symbol

After TXT code word – Liability ID

**Example:**

110,20091120,3,10500086,0," 03105000860000390201994867", "61101014010047762221000000","Good Company|Sp. z o. o.|Piłsudskiego 3|47-220 Kędzierzyn-Koźle", "Urząd Skarbowy w Kędzierzynie Koźlu||Piotra Skargi 19|47-220 Kędzierzyn-Koźle",0,10101401,"/TI/N6571112238/OKR/08M09/SFP/CIT2|/TXT/Zaliczka CIT8||", "", "", "71"

## 2.4. Direct debit import format

The structure of a file can be defined in Import/Export module in Tools section. In order to define structure you should choose **Add template** and then **direct debit** as the type of template.

On the next screen you should define specification of imported file: name of template, data separator, code page, decimal separator, format and date separator. You should define whether text fields will be transferred in inverted commas and whether the first line of file includes column's labels.

File's structure field includes data, which is mandatory in imported file. In case of direct debit transfer, it is:

- Creditor's account
- Creditor's Tax Identification Number
- Debtor's account
- Debtor's name
- Amount
- Payment ID

On the left side there are other fields, which can be filled in but which are not mandatory. If you add an optional field to file's structure, given field will have to be filled in imported file.

Ignore fields can be used to omit given values in file (e.g. file contains empty or unused fields).

File with direct debit may contain following characters:

- letters (also Polish)
- digits
- separators: "\", ";", ":", "(", ")", "[", "]", "{", "}", "=", "\_", "%", "~", "\^", ":", ":", "<", ">", "@", "\$", "&", " ", "#", "\*", "+", ".", "?", "!", " ", "-", "."

*Length / format:*

- n = numeric (0-9),
- an = alphanumeric; content is in inv. commas "" (Hex 22); if there is more lines – there are | signs (Hex 7C; Decimal 124) between them.
- d = date, format: YYYYMMDD
- F = fixed length
- V = variable length

### Detailed field's description of MultiCash PLD/PLG format – Direct debit/GOBI

Field description	Type	Length /format	Example / Description
Transaction type: 210: direct debit	mand.	3nF	210
Payment execution date; RRRRMMDD format	mand.	8dF	20090214
Amount in grosz (no commas)	mand.	15nV	400011
Ordering party's BSC (Bank Sorting Code) – always 8 digits (from 3rd to 10th of the 26-digits account number)	mand.	8nV	10501038
Not used; value = "0"	mand.		0
Creditor's account number; in inv. commas	mand.	34 a V („ not counted)	"29105010381000002201994791"
Debtor's account number; in inv. commas	mand.	34 a V („ not counted)	"50105000861000002273635771"
Creditor's name and address; each line is separated with " " ; in inv.commas	mand.	4*35 a V („ not counted)	"CREDITOR_S.A.   CREDITOR_S TREET WARSAW"
Debtor's name and address; each line is separated with " " ; in	mand.	4*35 a V („ not counted)	"DEBTOR S.A.  UL._ZIELONA_12 02-

inv.commas			022_WARSZAWA"
Not used; value = „0”	mand.		0
Beneficiary's BSC (Bank Sorting Code) – always 8 digits (from 3rd to 10th of the 26-digits account number)	mand.	8 n V	10500086
Description of a direct debit; each line is separated with “ ” ; in inv.commas	mand.	4*(Max 35aV) („” not counted)	"/NIP/5211011010/IDP/KLIENT123456/TX T/FAKTURA_NR_123456789" See details below
Empty field (only inv.commas)	mand.		""
Empty field (only inv.commas)	mand.		""
"07" if transaction type = 110, "01" if transaction type = 210	mand.		"01"
Reference number given by Customer	opt.	Max 32aV	"123456789"
End of transaction record	mand.	<CR><LF>	

#### Direct debit details specification:

Direct debit details consist of 4 lines divided by “|”. Each line may include maximum 35 characters.

First line of direct debit details: code word /NIP/, then creditor's NIP without space, dash or other dividing characters (10n). Then code page /IDP/, then payment ID (20). If sum of all characters in code words and their parameters is bigger than 35 signs, after 35<sup>th</sup> sign there should be: “|”, then “/” and the rest of payment ID. “/” determines that following content is the rest of information from previous line.

Just after IDP code word's content there is /TXT/ code word and then payment title description. Maximum length of the line is 35 n including /TXT/ code word. Payment title description cannot include “/”.

Information on payment title is optional while information on ordering party's NIP and payment ID has to be included in the file, together with /NIP/ and /IDP/ code words.

The separator of lines is “|”. Each line has 35 characters.

#### Example:

```
210,20060519,10045,10500028,0,"29105000860000123456789012","54105012141000000700084410","ING_NA
TIONALE_NEDERLANDEN_S.A.|TOWARZYSTWO_UBEZPIECZEN_NA_ZYCIE|UL._LUDNA_2|00-
406_WARSZAWA","LEON_BOGDANOWSKI|CENTRUM_SA|UL._GRZYBOWSKA_1|02-
778_WARSZAWA",0,10501214,"/NIP/5212013814/IDP/00005241/TXT/SK|//LADKA_ZA_20060522_PLATNIK_25
41256|MANDAT_00000024","","","01","123456789"
```

Instead of space there is “\_” sign.

### Detailed field's description of MNB format – Direct debit's consent form

Field description	Type	Length /format	Example / Description
Transaction type: 210: direct debit	mand.	3nF	210 direct debit
Consent date; format: RRRRMMDD	mand.	8dF	20071129 Consent date
Amount in grosz (no commas)	mand.	Max 15nV	<b>Constant value: 000</b>
Ordering party's BSC (Bank Sorting Code)	mand.	8nV	10501038
Value = "0"	mand.		0
Creditor's account number; in inv. commas	mand.	Max 34aV („not counted)	22105010388000111111111111 Creditor's account number
Debtor's account number	mand.	Max 34aV („not counted)	40109018700000000100198454 Debtor's account number
Creditor's name and address; each line is separated with " "; in inv.commas.	mand.	4*(Max 35aV) („  not counted)	"WIERZYCIEL_S.A.  UL._POLSK A_2 00-406_WARSZAWA"
Debtor's name and address; each line is separated with " "; in inv.commas	mand.	4*(Max 35aV) („  not counted)	"DLUZNIK_S.A.  UL._GRZYBOW SKA_1 02-778_WARSZAWA"
Not used; value = 0	mand.		0
Beneficiary's BSC (Bank Sorting Code)	mand.	8nV	10901870
Description of a direct debit; each line is separated with " "; in inv.commas	mand.	4*(Max 35aV) („  not counted)	"/NIP/5211011010/IDP/KLIENT12 3456/TX T/FAKTURA_NR_12345 6789" See details below
Empty field (only inv.commas)	mand.		" "
Empty field (only inv.commas)	mand.		" "
Disposal classification "01" if transaction type = direct debit	mand.		"01"
Empty field (only inv.commas)	mand.		" "
End of transaction record	mand.	<CR><LF>	

### Exemplary electronic version of the Consent contained in the file:

210,20070820,000,10500028,0,"18105000861000002273109617","70106000181000000700084410","SuperEner

## 4. Multicash INT (MT103) format

The ING BusinessOnLine system, offered by the ING Bank, uses MT103 format for transfers in foreign currencies and for international transfers.

Each MT103 file contains header and transfers' data (text blocks).

SWIFT (and currency transfers section in ING BusinessOnLine) accepts following characters:

a b c d e f g h i j k l m n o p q r s t u v w x y z  
 A B C D E F G H I J K L M N O P Q R S T U V W X Y Z  
 0 1 2 3 4 5 6 7 8 9  
 / - ? : ( ) . , ' +

Notice: Line cannot begin with either a character "-" or ":".

Records's description columns:

No. / Name = number and field's name  
 m / o = fields' type  
           mand. - mandatory  
           opt - optional  
 Format = Length and field's parameters  
           a = alphanumeric field  
           n = numeric field  
           F = fixed number of characters  
           V = variable number of characters

<CR><LF> (ASCII 13 + 10) is used before each line.

Header:

Field description	Type	Length /format	Example / Description
:01: References	opt.	16 a V	File's reference number
:02: Total amount	opt.	17 n V	Checksum– the sum of amounts of all transfers in field :32A:
:03: Orders' number	opt.	5 n V	The number of transfer's orders in the file
:04: Ordering party's bank	mand.	11 a V	Ordering party's BSC (Bank Sort Code)
:05: Ordering party	mand.	4* 35 a V	Name and address of ordering party
:06: BPD file's number	opt.	8 a V	BPD file's number
:07: File's name	opt.	12 a V	The name of the file on the disk

Zlecenia płatnicze:

Opis pola	Typ	Długość /Format	Przykład /Opis
:20: Reference number given by Customer	opt.	16 a V	Any text
:32A: Payment's description Sub-field 1:			

Requested execution date	mand.	6 n F	Date of execution in YYMMDD format
Sub-field 2: Currency	mand.	3 a F	Currency – ISO code
Sub-field 3: Amount	mand.	15 n V	Amount with comma (,) as a decimal character
:50: Ordering party	mand.	4*35 a V	Name and address of ordering party; account number is in sub-field 1 of field :52A:
:52A: Ordering party's bank	mand.		
Sub-field 1: Prefix		3 a F	/C/ = Credit /D/ = Debit
Account number		34 a V	Account no. in IBAN format with PL at the beginning
Sub-field 2: Ordering party's BSC		11 a V	BSC of Ordering party bank
:53A: Intermediary Bank SWIFT Code	opt.	11 a V	Intermediary Bank SWIFT Code
:57A: Beneficiary Bank SWIFT Code	mand.	11 a V	Beneficiary Bank SWIFT Code
:59: Beneficiary	mand.		
Sub-field 1: Account no.		34 a V	Account no. of Beneficiary
Sub-field 2: Address of Beneficiary		4* 35 a V	Name and address of Beneficiary Last field of Beneficiary's data must contain two-characters country code of beneficiary
:70: Payment details	mand.	4* 35 a V	Payment details 1 to 4
:71A: Fees	mand.	3 a F	Fees settled by BEN (beneficiary), OUR (ordering party) or SHA (shared)
:72: Fees account and opt. negotiated rate and value date	mand./opt.	3*35 aV	If in :71A: is OUR or SHA in :72: must be account number for fees – in IBAN format
Sub-field 1: Number of fees account			
Sub-field 2: TKS or TKN		11 a F	TKS in form TKSEUR3,555 – negotiated rate for all orders TKN in form TKNEUR3,666 – negotiated rate for single order
Sub-field 3: TKDW		10 a F	TKDWMMRRRR in form TKDW311208 – value date shorter than SPOT; if there is no negotiated rate, TKDW should be placed in the sub-field 2.

If you cannot get the bank SWIFT code from your beneficiary it is possible to fill the name and address of Beneficiary bank in payment order instead of SWIFT. Then the MT103 file should include the field :57D: instead of :57A: (in 4th line of Beneficiaries Bank address you should put two characters of country code).

## 5. Foreign contractors import format

The ING BusinessOnLine system offers a possibility to import foreign counterparties by using CSV files (comma separated values) in the structure defined by system Users.

File structure is being defined in Import/Export module in Tools section. In order to define structure you should choose **Add template** and then **foreign counterparties** as the type of template.

On the next screen you should define specification of imported file: name of template, data separator, code page, decimal separator, format and date separator (last 3 are not used in this case). You should define whether text fields will be transferred in inverted commas and whether the first line of file includes column's labels.

### Defining import template

Template type

#### Creating template - Foreign contractors

Template name

Data separator

Code page

Decimal separator

Data format

Data separator

Text field in quotation marks

Field names in the header

#### Available fields

adres kontrahenta  
Bank's name 1  
Bank's name 2  
Counterparty's name 1  
Counterparty's name 2

Add >>

Add all >>

<< Remove all

<< Remove

#### File structure

Counterparty's abbreviated name  
Kod SWIFT / BIC banku  
rachunek kontrahenta

Move up

Move down

Reduce

Duplicate

File's structure field contains data, which is mandatory in imported file. In case of foreign counterparties it is: counterparty bank's SWIFT/BIC code, counterparty's short name and account.

On the left side there are other fields, which can be filled in but which are not mandatory. If you add an optional field to file's structure, given field will have to be filled in in imported file.

Ignore fields can be used to omit given values in file (e.g. file contains empty or unused fields).

Caution! Counterparty's country field, even though it is marked as optional, should be included in imported file. It has to be filled in with country code, which consists of two letters.

File with domestic counterparties may contain following characters:

- letters (no Polish diacritic signs)

- digits
- separators: " / , ; : . , ( ) ' " { } , - , + , : , ? , ' , - , : , "

Field description	Type	Length /format	Example / Description
Bank's SWIFT/BIC code	mand.	8aV/11aV	ARABATWW
Counterparty's short name	mand.	35nV	Beta
Counterparty's account number	mand.	35aV	AT921904111111122222
Counterparty's address	opt.	35aV	WAFFELMASCHINEN
Group of counterparties	opt.	35aV	Partners <i>Group of counterparties has to be created earlier</i>
Ignore	opt.	-	<i>Field is used in order to omit position in imported file's line</i>
Country of counterparty's bank	opt.	2aV	SE
Counterparty' country	mand.	2aV	SE
Bank's city	opt.	35aV	Warszawa
Bank's name 1	opt.	35aV	ING Bank
Bank's name 2	opt.	35aV	Slaski
Counterparty's name 1	opt.	35aV	Beta Investment
Counterparty's name 2	opt.	35aV	Company
Resident	opt.	1aF	T

**Example:**

INGBNL2A;Tulipany;NL74ABNA0483715336;Westeinde 15, 1000 AB Amsterdam;NL;

## 6. Import format of orders of cash withdrawal in a branch

Typical information file is a test file, which contains information on cash withdrawals in the ING Bank's branches and on corrections and errors of transactions.

The file contains single header line and multiple details' lines. Header line's format differs from details lines' format.

The file consists of lines divided into fields. Individual fields written in line are separated by ";" (semicolon).

Decimal separator is "." (dot). Numeric data is written without thousandth separators (i.e. 123456789 is correct, while 123,456,789, 123'456'789 and 123 456 789 are incorrect).

Fields may have fixed or variable length and contain numeric, alphanumeric data or dates. Text fields are written in inverted commas. The file is saved in LATIN 2 (CP 852) code page.

### **INPUT FILE**

The Client sends to Bank two types of files – the first one includes new transactions, the second one (correction file) includes all changes in transaction already sent to Bank (accepted – correct or rejected during file's control stage).

#### **Information on withdrawals**

Information file starts with header, which is followed by "W" flag.

The header presents: Client's SWE ID, file's ID, the number and amount of withdrawals. Individual fields in header are separated by ";" (semicolon).

Information file's header:

Field description	Type	Length /format	Example / Description
Flag	mand.	1aF	„W” – withdrawals
Client's ID	mand.	6nV	Client's SWE ID, e.g. number '1' should be always presented as '000001', never as '1'.
File's ID	mand.	16aV	File's ID (given by Client)
Count	mand.	5nV	The number of withdrawal positions in the file (the number of lines)
Value	mand.	15nV	The sum of all withdrawals in the file

The header line ends with the end of the line sign (CRLF).

In the Client's ID field – 6-sign long alphanumeric Client's ID, given by the Bank, e.g. number '1' has to be always presented as "000001", not as '1'.

In the file's ID field – 16-sign long alphanumeric file's ID, individual for each file, given by a Client in cooperation with the Bank. The first 8 characters correspond to file's generation date in RRRRMMDD format, following characters contain file's daily number, completed by zeros from the left side.

Example of header:

W";"123456";"2006052101";6;1300.00

In the following lines of information file, transaction lines are presented. The structure of single line of typical information file is given below:

Information file transaction's line:

Field description	Type	Length /format	Example / Description
Line	mand.	4nV	Withdrawal order line's number
Person	mand.	1aF	"1" – Resident, "2" – non-resident
PESEL	mand.	11aF	Personal Identification Number of a person, who withdraws cash. For non-resident the field is optional; in this case it should be left empty or filled in with zeros.
ID document	mand.	20aV	ID document number / passport number of a person, who

			withdraws cash
Account	mand.	26nF	The number of account (in IBAN standard), from which cash is withdrawn
Amount	mand.	11nV	Transaction's amount
Currency	mand.	3aF	Contains ISO code of account's currency (e.g. PLN)
Title	mand.	35aV	Payment's details
Signature	mand.	35aV	Withdrawal's signature – unambiguous transaction's ID; the first 4 characters is Client's ID
Date from	mand.	10dF	Specifies start date, from which cash may be withdrawn. The date in RRRR-MM-DD format
Date to	mand.	10dF	Specifies end date, up to which cash may be withdrawn. The date in RRRR-MM-RR format
Personal data	mand.	35aV	Name and surname of a person who withdraws cash
Address	mand.	35aV	Address of a person, who withdraws cash – street and city
Notification	opt.	3aV	Specifies the cost centre of retail branch, in which cash should be withdrawn
Specifications of denomination	opt.	3aV	Tak - specifications of denomination is required Nie - specifications of denomination is not required
Face value 1	opt.	5nV	Specifies face value for the currency For PLN = PLN 200.00 For EUR = € 500.00 For USD = \$ 100.00 For GBP = £ 50.00
Quantity 1	opt.	3nV	Determines the required amount of notes or coins for the field Face Value 1
Face value 2	opt.	5nV	Specifies face value for the currency For PLN = PLN 100.00 For EUR = € 200.00 For USD = \$ 50.00 For GBP = £ 20.00
Quantity 2	opt.	3nV	Determines the required amount of notes or coins for the field Face Value 2
Face value 3	opt.	5nV	Specifies face value for the currency For PLN = PLN 50.00 For EUR = € 100.00 For USD = \$ 20.00 For GBP = £ 10.00
Quantity 3	opt.	3nV	Determines the required amount of notes or coins for the field Face Value 3
Face value 4	opt.	5nV	Specifies face value for the currency For PLN = PLN 20.00 For EUR = € 50.00 For USD = \$ 10.00 For GBP = £ 5.00
Quantity 4	opt.	3nV	Determines the required amount of notes or coins for the field Face Value 4
Face value 5	opt.	5nV	Specifies face value for the currency For PLN = PLN 10.00 For EUR = € 20.00 For USD = \$ 5.00
Quantity 5	opt.	3nV	Determines the required amount of notes or coins for the field Face Value 5
Face value 6	opt.	5nV	Specifies face value for the currency For PLN = PLN 5.00 For EUR = € 10.00 For USD = \$ 1.00
Quantity 6	opt.	3nV	Determines the required amount of notes or coins for the field Face Value 6
Face value 7	opt.	5nV	Specifies face value for the currency For PLN = PLN 2.00 For EUR = € 5.00
Quantity 7	opt.	3nV	Determines the required amount of notes or coins for the field Face Value 7

Date from	mand.	10dF	Specifies start date, from which cash may be withdrawn. The date in RRRR-MM-DD format
Date to	mand.	10dF	Specifies end date, up to which cash may be withdrawn. The date in RRRR-MM-RR format
Personal data	mand.	35aV	Name and surname of a person who withdraws cash
Address	mand.	35aV	Address of a person, who withdraws cash – street and city
Notification	opt.	3aV	Specifies the cost centre of retail branch, in which cash should be withdrawn
Specifications of denomination	opt.	3aV	Tak - specifications of denomination is required Nie - specifications of denomination is not required

Optional fields (10th, 16th, 17th) should be empty (space) or filled in with zeros.

Transaction's line ends with the end of the line sign (CRLF).

Corrections may be transferred only for transactions, which had rejection status different than 'X'. For transactions with 'X' status or for transactions included in file, which was rejected because of wrong form, corrections should be sent as new withdrawals in withdrawal file.

Example:

"K";"1234";"2006052101";6;2500.00↓

0001;"2006052101";0001;"1";"33350511121";"DD1234567";77105000861000000100756501;400.00;"PLN";"SET

"↓" means the end of the line sign (CRLF).

## 7. MT940 - statements format

Polish characters are coded in CP852 (IBM852) format.

Field description	Length /format	Example / Description
:20: (starting record)	5aF	MT940 Fixed text: MT940
<CR><LF>:25: (account number)	29aV	/PL29105010381000002201994791 Account number in IBAN format followed by '/'
<CR><LF>:28C: (statement number)	5nF	00001 Statement's consecutive number in current calendar year

The example of a section:

```
:20:MT940
:25:/PL29105010381000002201994791
:28C: 00001
```

<CR><LF>Field :60F: (starting balance)

Field description	Length /format	Example / Description
C or D (balance mark)	1aF	C – credit balance D – debit balance
Booking date	6dF	030616 Date structure YYMMDD YY – year, MM – month, DD - day
Currency	3aF	PLN ISO currency code
Amount of balance	15nV	123456789101,45 1 to 15 numeric signs, including decimal separator (,) - <i>comma</i>

The example of a section:

```
:60F:C030616PLN123456789101,45
```

<CR><LF>Field :61: (transaction line)

Field description	Length /format	Example / Description
Value date	6dF	030616 Date structure YYMMDD YY – year, MM – month, DD - day
Booking date	4dF	0616 Date structure MMDD MM – month, DD - day
C or D (transaction mark)	1aF	C – credit D - debit
Amount	15nV	123456789101,45 1 to 15 numeric signs, including decimal separator <i>comma</i> (,)
Operation code	4aF	S076 S (fixed) + 3 digits of operation code (floating)
Transaction reference number	13nV	12345678910 Transaction's ID (11 numerical signs)
Separator	2aF	// Separator „//” appears always when SIMP number or rejection reason information is in the next field
SIMP identification number	15nV	111112222233  Contracting party identification number (only for Clients using SIMP service).  <i>The last 15 characters from the virtual account number SIMP for</i>

		which payment was made.
<CR><LF> Exchange rate	33aV	KURS 4,0567 At the beginning there is always word KURS, then after one space the FX rate is given. Decimal separator for FX rates is <i>comma</i> (.). The FX rate can be given with the precision of 6 decimal points. However, ING BSK uses only 4 decimal points.

The example of a section:

:61:0306160616D123456789101,45S07612345678910//111112222233  
KURS 4,0567

<CR><LF> Field :86: (transaction's description)

Field description	Length /format	Example / Description
Transaction code	3nF	076 Transaction code from the field :61:
Currency transactions sign	6aF	/OCMT/ A sign preceding an operation amount (it refers to the transactions in which the transaction currency differs from the currency of the account). Fixed text.
Currency	3aF	USD ISO currency code
Transaction's amount	14nV	10001234567,89 Max 14 signs including decimal separator (,) <i>comma</i> . The transaction currency can be different from the currency of the account..
<CR><LF>:86:	4aF	:86: Repetition of the field :86:
Transaction's code	3nF	076 Transaction code from the field :61:
~00 – Transaction type's identification	27aV	~00 Field 00 must be preceded with „~” <i>tilda</i> . This separator precedes all of the numerical sub fields from the :86: field
Transaction's code	4aV	COCG Internal code given by the bank
Transaction code's description	23aV	PRZELEW Detailed description of the code
~20-25 – payment's details	6*27aV	FAKTURA 1/F/03 FAKTURA 2/F/03 Payment details
~26-28 payment's details continuation	3*27aV	Payment details continuation
~29 – Beneficiary's account number	26nF	19114020040000350230599137 The field should be field in only when the account of the contracting party in the bank in Poland is in the NRB standard: 26 numeric signs (2 signs of a control number, 8 signs of the bank code, 16 signs of the account number)
~30 – Beneficiary's bank sorting code	12aV	11402004 Exactly 8 signs. In case of foreign banks (located outside Poland). The sorting code may be different than 8 signs (max. 12)
~31 – Beneficiary's account number	24aV	0000350230599137 1. Number of the contracting party's account recorded in NRB standard – 16 signs long. 2. For the account's standard other than NRB – max 24 signs
~32 Name of the contracting party	27aV	KONTRAHENT SP. Z O.O. 1st. line
~33 Name of the contracting party	27aV	2nd. line
~34 Transaction's code	3nF	076 Transaction code from the field :61:
~38 Contracting party full account number	34aV	PL19114020040000350230599137 Number of bank account in IBAN: there is 2 sign country code

		preceding 26 signs account number.
~60 Transaction fee information	27aV	OPLATA ZA PRZELEW 5,00 The field is filled in optionally for chosen transactions. At the beginning of the field the following words are always used: OPLATA ZA PRZELEW, then, after one space the fee amount is given.
~61 Transaction exchange rate	27aV	KURS 4,0567 Optional. At the beginning of the field always there's KURS word, then after one space the FX rate is given (the structure admits precision of up to 6 decimal points, but the bank uses only 4 of it). The separator is <i>comma</i> (.).
~62-63 Contracting party (continuation)	2*27aV	Ul. GRZYBOWSKA 12 00-950 WARSZAWA Contracting party – additional data

Additional information:

A = alpha literal  
N = numeric  
AN = alphanumeric

The first sign met after the code of an operation before the 00 field key becomes the separator of the structure of the fields 86. At present ING Bank Śląski makes use of “~” sign as a separator.

## 8. MT942 - statements format

Polish characters are coded in CP852 (IBM852) format.

Field description	Length / Format	Example / Description
<CR><LF> :20: (starting record)	5aF	STARTDISP  Fixed text: STARTDISP
<CR><LF> :25: (account number)	29aF	:25:/PL11105013571000000702291899  Accounts IBAN standard: /PLInnnnnnnnnrrrrrrrrrrrrrrrrrrrr where PL is the country code ll – control number – 2 signs nnnnnnnnn – number of bank business unit keeping the bank account – 8 signs rrrrrrrrrrrrrrrrrr – ordinal number of the account in the business unit of the Bank keeping the bank account – 16 signs

The example of a section:

:20: STARTDISP

:25: :25:/PL11105013571000000702291899

<CR><LF> Field :13: (transaction's date)

Field description	Length / Format	Example / Description
Date, time	10dF	:13:0503222359  Date structure YYMMDDHHMM, YY - year, MM – month, DD – day, as for a time there is a fixed value 2359

The example of a section:

:13:0503222359

<CR><LF>Field :61: (transaction line)

Field description	Length / Format	Example / Description
Value date	6dF	:61:0504130413C55628,35S07697208101466  Date structure YYMMDD YY – year, MM – month, DD – day
Booking date	4dF	:61:0504130413C55628,35S07697208101466  Date structure MMDD MM – month, DD – day
C or D (transaction mark)	1aF	C – credit D – debit  :61:0504130413C55628,35S07697208101466 :61:0504130413D55628,35S07697208101466
Amount	15nV	:61:0504130413C55628,35S07697208101466  1 to 15 numerical signs, including decimal separator <i>comma</i> (,)
Operation code	4aF	:61:0504130413C55628,35S07697208101466  S (fixed) + 3 digits of operation code (floating)

Transaction reference number	13nV	:61:0504130413C55628,35S07697208101466 Identification number of the transaction (from the main system of the Bank) 11 – 13 numerical signs
Separator	2aF	:61:0504130413C55628,3 S076957208101466// Separator „//” appears always when SIMP number is in the next field
SIMP identification number	15nF	:61:0504130413C55628,3 S076957208101466//853000001002989 <b>The last 15 characters from the virtual account number SIMP for which payment was made.</b>
<CR><LF> Exchange rate	AN	:61:0504130413C55628,3 S076957208101466//853000001002989 KURS 0,2566  The following information is presented in the field “further information”: FX rate. The field is used only for the foreign transactions or FX transactions. At the beginning of the field there is always the word KURS (FX rate), then after one space the FX rate is given (as a FX rate, we understand the FX rate of the transaction being sent). The value of the FX rate is given using the numerical signs (28 signs at maximum) and separator i.e. ‘,’ (comma). The FX rate is given with the precision of 6 decimal points.

**The example of a section:**

:61:0504130413C55628,35S07697208101466//853000001002989

<CR><LF> Field :86: (transaction's description)

Field description	Length / Format	Example / Description
Transaction code	3nF	:86:076 Transaction code from the field :61:
Currency transactions sign	6aF	:86:025/OCMT/EUR2000,00  A sign preceding an operation amount (it refers to the transactions in which the transaction currency differs from the currency of the account). Fixed text /OCMT/.
Currency	3aF	:86:025/OCMT/EUR2000,00  ISO currency code
Transaction's amount	14nF	:86:025/OCMT/EUR2000,00  Max 14 signs including decimal separator (,) <i>comma</i> . The transaction currency can be different from the currency of the account.
<CR><LF>:86:	4aF	:86:  Repetition of the field :86:
Transaction's code	3nF	:86:076~00ONCCPRZELEW

		Transaction code from the field :61:
~00 – Transaction type's identification	27anF	:86:076~00ONCCPRZELEW Field 00 must be preceded with „~” <i>tilda</i> . This separator precedes all of the numerical sub fields from the :86: field
